CAREER SUMMARY

I am a creative and detail-oriented software engineer who enjoys transforming ideas and designs into clean, elegant code to create effective websites and apps. I have about seven years of experience developing websites, apps, user interfaces and creating effective solutions as required by projects I have worked on.

WORK EXPERIENCE

Software Engineer *(remote)* at **Formula Monks** (US/UK)   **October 2022 – July 2024**

- Spearheaded the frontend development of a large-scale commercial web application, consolidating four different apps into one to effectively improve the user experience.
- Collaborated with product managers, backend engineers and UI/UX designers to develop and integrate frontend interfaces with complex backend systems.
- Implemented effective custom hooks that significantly optimized important project features.

Frontend Engineer *(remote)* at **Bejamas** (Poland)   **September 2021 – August 2022**

- Implemented custom checkout requirements for a client project which led to a significantly better user experience in the checkout and order pages.
- Developed user interfaces for websites and apps by coding to strict design specifications while working majorly with JavaScript, TypeScript, React, Redux and NextJS in an agile environment.
- Implemented crucial code refactors and high-priority bug fixes which ensured high-quality deliverables.

Frontend Engineer *(remote)* at **Squared Ace Solutions** (Nigeria)   **April 2017 – August 2021**

- Proposed and led the team that migrated a major client's website from WordPress to react. The result of the implementation was a better reactive UI/UX and over 50% increase in revenue for the client.
- Created CI/CD pipelines which improved the team's workflow and project review process.
- Converted static, non-responsive websites to fully functional mobile-first, responsive websites.

SKILLS AND TECHNOLOGIES
